

boydens engineering part of Sweco - Senior Project Leader HVAC & Electrical installations Bruges

Will you be our new Senior Project Leader HVAC & Electrical installations?

Do you share our passion for energy and sustainability? Are you talented at managing different projects at the same time? As Senior Project Leader, you are responsible for the complete building services follow-up of your projects (HVAC, electrical, plumbing installations...). Starting from conceptualisation through to delivery. During the design phase, you work closely together with your fellow design engineers and bridging with the client, and architects.

What is expected of you?

- You are involved in forming the concept and supervising his study in consultation with the project manager and your fellow design engineers.
- You steer and supervise the design phase (calculation and design) and guide the design engineers to prepare the specification manual.
- Thanks to your technical knowledge of HVAC, electrical & plumbing installations, you can provide advice to the architect and client regarding possibilities for their building project. The emphasis for you remains focused upon quality and sustainability.
- You attend site meetings and evaluate the execution files together with the client and architect.
- While performing site inspection you ensure a thorough technical follow-up of the works.
- As a pivotal figure, you ensure clear communication with your internal colleagues, the architect and the client.

Are you our ideal candidate?

- Degree in Civil or Industrial Engineering. A Bachelor in Electromechanics

climatisation/electricity, equivalent is also acceptable due to your extensive experience.

- Minimum 5 years of practical experience as a project leader. Experience within an engineering office is a plus.
- Good technical knowledge of HVAC, electrical & plumbing systems, while remaining interested in learning more.
- You have a high sense of responsibility and know how to organise yourself in order to bring several projects to a successful conclusion.
- You are strong communicator and utilize soft skills for a smooth cooperation.
- You speak perfect Dutch and are able to communicate in French and English.
- You have a basic knowledge of AutoCAD/Revit.

What does Boydens Engineering have to offer you?

- An exciting job with responsibility and technical challenge.
- A growing international company, where you and your colleagues can make a difference in reducing the CO2 footprint of tomorrows buildings
- A pleasant, family atmosphere where values such as lifelong learning, quality, expertise, sustainability and innovation are tangible.
- Flexible working hours, teleworking, working from our modern office in Zedelgem or alternately in an office closter to you: it's all possible.
- In addition to work, we organize fun team activities with colleagues.
- An attractive, competitive remuneration package, including fringe benefits, tailored to your knowledge, experience and competences.
- Growth opportunities depending on your efforts and talents.
